

## Long Bolt Fuel Pumps

Holley No. 12-856 fuel pump repair kit is just what you need to overhaul your original F.I. or long bolt pump. The inner and outer springs can not be used, but the rest is O.K. Now, if you need a long bolt pump, buy a Holley's high performance pump. Using any old A.C. pump that has the A.C. logo on top, use it to replace the Holley top. Now you have an original looking pump, except for the numbers on the side and for half the price of a dealer pump. Also, don't leave home without a spare kit in the trunk of your Vette. Costs about \$20.00 (kit).

## WANT A SHOCK?

Yes, believe it or not, Delco has the original black shocks for our 53-62 Vettes. Optional heavy duty not available. The rear shocks are missing the rock guard, but if you have or can locate an early car shock, cut the guard plate off and glue the plate onto the new shock. Or, you could fabricate one. Sorry, the dates won't be right, but then don't let any one crawl under your car.
